

**Echovirus Type 14  
Strain: H08330 539  
Culture Fluid (Heat Inactivated) (1 mL)**

## PRODUCT DESCRIPTION:

Echovirus Type 14 (Strain: H08330 539) is a non-enveloped enterovirus which measures 24-30 nm in size and contains a linear, positive-sense single stranded RNA.

Each frozen aliquot contains 1 mL of heat inactivated viral culture fluid. The culture fluid was clarified prior to heat inactivation by centrifugation to remove cellular debris. The pre-inactivation titer was determined from an infectious aliquot.

Viral inactivation is verified after heat inactivation by the absence of viral growth in tissue culture-based infectivity assays.

## INTENDED USE:

Heat inactivated viral culture fluids are sold as consumable testing materials. The suitability and performance characteristics should be determined by your laboratory for each intended usage.

These products are NOT intended for use in the manufacture or processing of injectable products subject to licensure under section 351 of the Public Health Service Act or for any other product intended for administration to humans.

## FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC PROCEDURES.

## BIOSAFETY:

Please consult your institution's regulations regarding the use of this product. For a detailed discussion on biological safety see the current edition of Biosafety in Microbiological and Biomedical Laboratories (BMBL), published by the CDC.

## PRECAUTIONS:

- Use Universal Precautions, this product is **potentially biohazardous**.
- Repetitive freezing and thawing is not recommended (aliquot material if necessary).
- To avoid cross-contamination, use separate pipette tips for all reagents.

## RECOMMENDED STORAGE:

Heat inactivated viral culture fluids should be stored at -65°C or below.
